HELENA, MONTANA 59604

1 JANUARY 1987

(406) 444-2506

#### TO MONTANA PILOTS:

THANK YOU FOR YOUR PURCHASE OF OUR 1987 AIRPORT DIRECTORY. WE HOPE THAT IT WILL ASSIST YOU IN YOUR FLIGHTS THROUGHOUT THE STATE OF MONTANA.

THIS DIRECTORY REFLECTS THE MOST CURRENT INFORMATION KNOWN TO US. WE DEPEND UPON YOUR HELP TO KEEP IT AS ACCURATE AND UP TO DATE AS POSSIBLE. IN YOUR TRAVELS THROUGHOUT THE STATE, IF YOU NOTICE ANY CHANGES OR CORRECTIONS, PLEASE WRITE OR CALL OUR OFFICE AT 444-2506. YOUR COMMENTS AND SUGGESTIONS ARE ALWAYS WELCOME ON NEW WAYS TO IMPROVE OUR DIRECTORY.

ALTHOUGH 80 OCTANE FUEL IS LISTED AS AVAILABLE AT MANY MONTANA AIRPORTS, ACTUAL AVAILABILITY MAY BE INTERMITTENT. SOME FIXED BASE OPERATORS ARE NOW OFFERING AUTOMOBILE GASOLINE TO AIRCRAFT HOLDING THE APPROPRIATE STC. WE SUGGEST THAT YOU CONTACT YOUR DESTINATION FBO PRIOR TO DEPARTURE TO INSURE AVAILABILITY OF YOUR REQUIRED FUEL.

#### BEST REGARDS

*Michael D. Ferguson*

## ADMINISTRATION

Martha E. Kurtz .....	Administrative Assistant
Barbra Proulx .....	Secretary
Cathy Hoyrup .....	Film Clerk

This airport directory has been compiled from information submitted by airport owners, flight operators and interested pilots. Every effort has been made to provide a complete and accurate directory. Because airport conditions are constantly changing, the Montana Aeronautics Division assumes no responsibility for any action taken by a pilot on the basis of information contained herein.

Pilots are reminded it is their responsibility to check FAA Notices to Airmen for current information as well as making a visual inspection of the airport before using.

Twenty-Sixth Edition Revised to January, 1987

## LIGHT SIGNAL PROCEDURES FOR AIRPORT TRAFFIC CONTROL

Signals from a portable traffic control light shall mean the following:

Color and Type of Signal	On the Ground	In Flight
STEADY GREEN	Cleared for take-off	Cleared to land
FLASHING GREEN	Cleared to Taxi	Return for landing (to be followed by steady green at proper time)
STEADY RED	Stop	Give way to other aircraft and continue circling
FLASHING RED	Taxi clear of landing area (runway) in use	Airport unsafe—do not land
FLASHING WHITE	Return to starting point on airport	.....

ALTERNATING  
RED & GREEN

General Warning Signal —  
Exercise Extreme Caution.

## MORSE CODE AND PHONETIC ALPHABET

# AERONAUTICAL CHART SYMBOLS

The Montana Aeronautics Division is attempting to standardize symbols used on aeronautical charts. You, as a pilot, realize the difference encountered from state to state and even in the world aeronautical charts to the sectional charts. We have decided to use the new symbols at the top of each directory page to help familiarize you with the system which is being used on the Montana aeronautical chart. The National Association of State Aviation Officials agreed on symbol standardization and offered the following as the solution to an old problem. We hope a standard system will be adopted nationwide by all government agencies. We welcome your comments on this matter.

3684-----Elevation in Feet  
L -----Lighting  
41-----Length of Longest Runway in  
          Hundreds of Feet  
U -----Unicom  
U1...122.8 for landing areas  
          (except heliports) without  
          an ATC tower or FSS  
U2...123.0 for landing areas  
          (except heliports) with  
          an ATC tower or FSS  
U3...123.05 for heliports  
★ -----Airport Beacon

# EMERGENCY SIGNALS -- Ground to Air

 NEED MEDICAL ASSISTANCE - URGENT USED ONLY WHEN LIFE IS AT STAKE	 ALL OK - DO NOT WAIT	 CAN PROCEED SHORTLY - WAIT IF PRACTICAL	 NEED MECHANICAL HELP OR PARTS - LONG DELAY	 DO NOT ATTEMPT TO LAND HERE	 Both arms forward horizontally: LAND HERE	 USE DROP MESSAGE Make throwing motion	 OUR RECEIVER IS OPERATING Cup hands over ears
Lie Prone	Wave one arm cover head	One arm horizontal	Both arms horizontal	Both arms waved across face	squat and point in direction of landing. Repeat.	Make throwing motion	Cup hands over ears
 NEGATIVE (NO)	 AFFIRMATIVE (YES)	 PICK US UP - PLANE ABANDONED	 AFFIRMATIVE (YES)	 NEGATIVE (NO)	 Fish tail plane	 Dip nose of plane several times	 White cloth waved vertically
 White cloth waved horizontally	 Both arms vertical	 Both arms waved vertically	 White cloth waved horizontally	 Both arms waved horizontally	 Both arms waved horizontally	 Both arms waved horizontally	 Both arms waved horizontally

## HOW TO USE THEM

If you are forced down and are able to attract the attention of the pilot of a reserve airplane, the body signals illustrated can be used to transmit messages to him as he circles over your location. Stand in the open when you make the signals. Be sure that the background, as seen from the air, is not confusing. Go through the motions slowly and repeat each signal until you are positive the pilot understands you.

INSTRUCTIONS

- LAY OUT SYMBOLS BY USING STRIPS OF FABRIC OR PARACHUTES, PIECES OF WOOD, STONES, OR ANY AVAILABLE MATERIAL
- PROVIDE AS MUCH COLOR CONTRAST AS POSSIBLE BETWEEN MATERIAL USED FOR SYMBOLS AND BACKGROUND AGAINST WHICH SYMBOLS ARE EXPOSED.
- SYMBOLS SHOULD BE AT LEAST 10 FEET HIGH OR LARGER IF POSSIBLE. CARE SHOULD BE TAKEN TO LAY OUT SYMBOLS EXACTLY AS SHOWN TO AVOID CONFUSION WITH OTHER SYMBOLS.
- IN ADDITION TO USING SYMBOLS, EVERY EFFORT IS TO BE MADE TO ATTRACT ATTENTION BY MEANS OF RADIO, FLARES, SMOKE, OR OTHER AVAILABLE MEANS
- WHEN GROUND IS COVERED WITH SNOW, SIGNALS CAN BE MADE BY DRAGGING, SHOVELING OR TRAMPING THE SNOW. THE DEPRESSED AREAS FORMING THE SYMBOLS WILL APPEAR TO BE BLACK FROM THE AIR
- PILOT SHOULD ACKNOWLEDGE MESSAGE BY ROCKING WINGS FROM SIDE TO SIDE

IF IN DOUBT, USE INTERNATIONAL SYMBOL

505

13. REQUIRE FUEL AND OIL  
14. ALL WELL  
15. NO  
16. YES  
17. NOT UNDERSTOOD  
18. REQUIRE MECHANIC

## SURVIVAL

1. Immediately after an emergency landing exit the aircraft if at all possible. Check for injuries but only give temporary first aid necessary to permit careful removal of casualties with serious injuries.
2. Stay away from the aircraft, if possible, until engines have cooled and spilled gasoline has evaporated.
3. After occupants are all out and a safe distance from the aircraft re-evaluate injuries and administer first aid as necessary.
4. If the weather is adverse, make or find temporary shelter.
5. Evaluate your location dangers: fire, sliding, rockfall, avalanche, terrain, weather.
6. Stay near the aircraft if at all possible. It contains the basic ingredients for warmth, shelter and signaling materials.
7. Turn on or make sure that your ELT is ON.
8. Signal for help. Do not neglect your aircraft radio. It is possible it may still be operational. Turn on squelch and volume and key the mike. If the results are positive, listen on a local or ATC frequency. When you hear a transmission transmit "MAYDAY - MAYDAY." If you should hear a jet, transmit on 121.5. All airlines and military aircraft monitor 121.5. If you do not hear any transmissions go ahead and transmit in the blind on this frequency. Limit your transmissions to about one every fifteen minutes. Transmitting places considerably more drain on the battery than receiving. If both your ELT and radio are working, you will hear the ELT signal when listening on 121.5. It may be necessary to turn the ELT off when transmitting or listening on 121.5. (Don't forget to turn the ELT back on!)
9. If the weather is cold or wet you should not spend too much time trying to signal. Your prime effort must be directed toward conserving the energy you have.
10. Wings, rudder, etc., all may be used to make a shelter. Keep this shelter as small as possible to lessen the area your body must heat. Insulate shelters with boughs, bark, tarps, maps, etc. Use **anything** to keep the rain from getting inside your shelter. Body heat loss is energy loss.
11. Your aircraft can fulfill most of your basic needs if you improvise. Think basic needs: Shelter (cover), warmth (fabric), tools (metal). Maps, newspaper, engine cover, plastic tarps all make excellent emergency bedding.
12. Build a fire, if possible. Don't forget that the aircraft gasoline is a valuable resource in starting a fire when only wet wood is available. Caution must be used when using gasoline. Soak or pour gasoline on the wood but be sure the container is out of reach when igniting the wood. Paper such as charts can also aid in getting a fire started. However, do not burn your charts for firewood. Paper makes an excellent insulation for bedding, clothing and shelter. NOTE: Pre-plan building a fire. Have an adequate amount of wood gathered to keep the fire going for a length of time prior to lighting.
13. In cold weather, insulation and upholstery from the craft make excellent material for overboots, sleeping bags, mittens, hats, and ground insulation. Sew them together with salvaged aircraft wire. Put plastic side out for better wetness protection.
14. If running water is not readily available melt snow or ice in

improvised pot, or squeeze dew drops from aircraft surfaces. Place a sheet of plastic flat on the ground so that it may collect dew or condensation. If it is raining, place plastic sheet in ground depression to collect water.

15. Keep your signal fire burning all the time. Smoke and firelight can be seen from great distances. Both air and ground searchers will be looking for them.

16. Aircraft should be made **VISIBLE FROM THE AIR** if possible. Clear brush, cut trees, etc. Be prepared to make signals as aircraft approaches your area. Keep the mirror handy if the sun is shining. Practice its use.

17. Get your emergency signaling devices ready and have signal equipment handy. Every possible effort must be made to attract searchers to your location by signals—mirror, smoke, flares, color panels—and to sustain life and energy until assistance arrives.

18. Colored panels can tell a message. Pile brush in SOS. Stamp large, two feet wide letters SOS in the snow. Fill stamped marks with boughs or small brush.

19. Clear windows make a fair emergency mirror. **SIGNALS MAKE YOU EFFECTIVELY BIGGER.**

### **CAUTION**

**SURVIVAL WILL DEPEND GREATLY UPON YOUR STATE OF MIND. PSYCHOLOGICAL DISCIPLINE IS A MUST. YOU MUST SUSTAIN LIFE UNTIL RESCUED. REMAIN CALM! THINK!**

### **SURVIVAL KIT**

Tool kit (small, light weight)

First aid kit

Food (freeze dried,  
candy bars, etc.)

Disposable space blankets

Saw

Matches (waterproof) & fire starter

Signaling device(s)—(flares,  
mirror, strobe light etc.)

Knife

50' 1/8" nylon rope

Garbage sacks

Fish hooks, sinkers and line

Can opener, sierra cup

Seal contents in a container

suitable to heat & store water

Winter clothing & sleeping bags (during winter months)

# MOUNTAIN FLYING TIPS

## GENERAL

1. Make sure that your proficiency level and your aircraft meet the special demands of your planned flight.
2. If you are not sure of your capabilities, take some dual instruction from a flight instructor experienced in mountain flying.
3. Keep your aircraft as light as possible.
4. Be familiar with your planned route of flight and destination airport. Check the field conditions with FSS or experienced local pilots. Familiarize yourself in advance with the field length, elevation, and any special approach/departure procedures.
5. Obtain a thorough weather briefing. A forecast of marginal VFR frequently translates to IFR in the mountains.
6. Plan your trip for early morning or evening hours. Turbulence and density altitude are usually greatest from 10:00 a.m. to 6:00 p.m.
7. Stay out of the mountains if the forecast winds aloft exceed 25 knots below 12,000 MSL. The wind velocity can double in vicinity of mountain passes and canyons. NEVER fly up a blind or narrow canyon.
8. Mountain winds follow contours much like a stream. The air on the lee (downwind) side of a mountain may be extremely turbulent. Fly on the upwind side of a canyon whenever possible.
9. Cross-check your instruments and altitude indicator frequently. Visual horizons in the mountains may be illusory.
10. Maintain your airspeed in downdrafts and don't panic. Be able to turn to lower terrain at all times.
11. Approach ridges at a 45 degree angle. If caught in a downdraft, you cannot turn away toward lower terrain.
12. Be courteous to those on the ground who are enjoying a wilderness experience. Maintain sufficient altitude—2,000 AGL is suggested over wilderness areas.
13. Plan your trip over valleys as much as possible.
14. Carry a good survival kit and familiarize yourself with its use.

## LANDINGS

1. Transmit in the blind on **122.9 MHz** at non-unicom airstrips and announce your intentions.
2. A good check out and personal knowledge of conditions existing at “non-standard” airports/airstrips is essential to a safe operation. Some mountainous airstrips are, or should be, considered “one way.” Although normally we are taught to land uphill, there are a number of airstrips where downhill/downstream landings are safer. A go-around must always be considered. Wet grass reduces braking action and most mountain airstrips are short.
3. Control your rate of descent with power. Maintain a stable airspeed (generally the short field approach speed listed in your aircraft operations manual).
4. Before beginning your approach, circle your intended destination to ensure that the field is clear of other aircraft, livestock, wildlife, etc.
5. Abort your approach if the air becomes too turbulent on your let-down. Avoid low altitude maneuvering. Be alert for animals on the runway.

## TAKE-OFF

1. **Check density altitude!** If take-off performance for your aircraft is questionable, wait until evening or early morning when the air is cool.
2. Remember that tall grass or soft field conditions can add considerably to your take-off distance.
3. Choose a go, no-go point on the runway. If not airborne at that point, abort the take-off and wait for better conditions.
4. Take off downstream (downhill) whenever possible. Avoid taking off toward rising terrain.
